*"...This fourth edition of Voice Disorders builds on the earlier editions and offers the student and clinician a comprehensive combined study of the respiratory, laryngeal, and neurological subsystems that make up voice production. The authors blend voice science with voice treatments ranging from traditional interventions to recent advances in cellular therapies, muscle strength training, and treatments for special populations such as singers and actors and those with complex medical conditions. Cases highlight various intervention strategies. With this fourth edition of Voice Disorders, the study of voice disorders comes out of its infancy and into the modern era of comprehensive care for the voice. ...I have had to privilege of reviewing previous editions of Voice Disorders and share a rich professional and personal relationship with the authors. They both reflect the title "teacher-scientist-clinician" and this edition punctuates that title perfectly. Since they are both teachers, they understand the needs of students and have developed educational approaches to nourish those needs in the classroom as well as in the research lab and in clinical practice."*—**Thomas Murry, PhD, Professor, Otolaryngology-Head and Neck Surgery, Co-Director, Loma Linda University Voice and Swallowing Center, Loma Linda University Health Center**
